CYBERFERO

vCISO

**Virtual Chief Information Security
Officer**

Outsource your cybersecurity management.

We guarantee expert and proactive management, protecting your business from threats and vulnerabilities.

- **Access to Specialized Knowledge**
- **External and Objective Vision**
- **Agility and Speed of Implementation**
- **Lower costs**

Chief Information Security Officer (CISO)

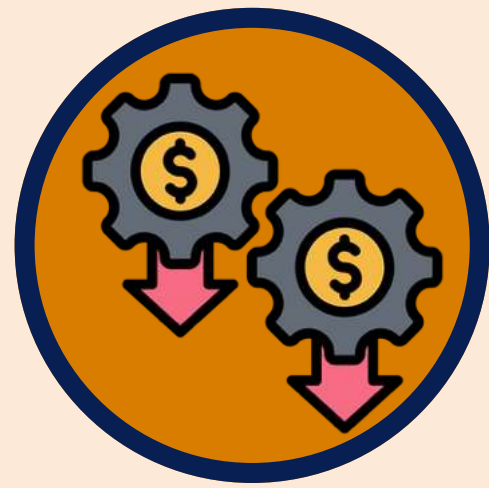

The **CISO** (Chief Information Security Officer) is directly responsible for IT security within corporate bodies. In this context, its primary task is to define the strategies necessary to protect company data and technologies. Furthermore, he is responsible for training employees on **Cybersecurity** and, at the same time, defining the budget allocated to it at an administrative level.

However, this is a figure who, due to the high costs associated with his role and the complex security measures he is required to implement, may not be accessible to small and medium-sized businesses that do not have a budget specifically dedicated to IT security. . For this reason, the figure of the vCISO emerges as a more accessible alternative.

Our Virtual CISO (vCISO) service offers a solution that allows the outsourcing of this key figure. This approach ensures various benefits, including lower costs, objective reporting provided by third parties, and access to highly qualified personnel who are constantly updated on the latest security trends.

Why choose a vCISO?

Reduced costs

Fewer financial barriers to having access to qualified consultants, with many years of experience in the security field and to a greater catalog of security services than hiring a CISO.

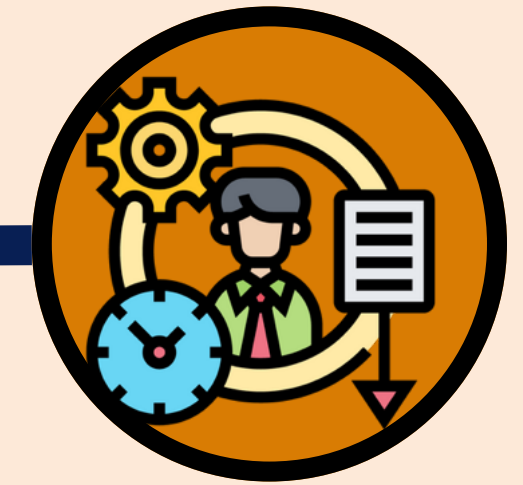

Vision

Broader vision of the security landscape, considering our experience in companies in multiple areas, objective third-party reporting regarding the level of risk and maturity of security processes.

Specialized Skills

Qualified personnel with high-level professional certificates / certifications in the Security / Governance / Privacy field recognized internationally (CISSP, CISM, CISA, CDPSE).

Knowledge of standard models

Knowledge of management frameworks (e.g. COBIT) and/or security standards (e.g. ISO-IEC 27001), which are certainly capable of guaranteeing a systemic and structured approach to adequate information protection.

Cyberfero is aware that for many companies the cost of a full-time managerial figure, although necessary, may not be sustainable. Furthermore, needs often do not require the assiduous and continuous presence of a professional in the company. For this reason it has created a professional service dedicating only the necessary time to its customers, reducing the cost of this managerial figure to a fraction of the overall cost.

What does vCiso do for your company?

- The **definition** of a corporate security plan and strategies, strictly related to business ones;
- Carrying out and **updating** a security risk analysis;
- **Support** for the definition of the security architecture;
- The definition and adoption of appropriate incident response and **management measures**;
- The definition and adoption of **solutions** and models to guarantee the availability of systems;
- Support for the design and implementation of development **projects**, supporting all security aspects; thanks also to the high-level professional certificates/certifications in the field of Project Management recognized internationally (PMP Project Management Professional (PMP)[®]);
- **Addressing** aspects of strengthening and secure configuration of systems;
- Monitoring the **performance** of protection measures;
- **Coordination** of Security Services;
- Support in drafting the **documentation** required by EU Reg. 2016/679;
- **Plan**, according to effective models, the activities of first preparing and then evolving the Information Security Management System (SGSI), ensuring both coverage of all the aforementioned issues and the pursuit of immediate improvements, operating on multiple levels of intervention .

The main hard skills offered by SOD consultants as a service are:

Data Science skills

Knowledge of the most common programming languages

Managerial skills and business knowledge

CYBERFERO also makes the following soft skills available to its customers:

Project management and problem solving

Time management and flexibility

Proactivity and adaptation

Leadership skills

Analytical mentality

Stress management

Choosing a vCISO for your company means:

Optimize the economic and human resources available.

However, beyond this purely financial aspect, opting for a vCISO also represents a strategic and thoughtful investment. In this way, we are able to look towards a safer and more sustainable future in the increasingly complex cybersecurity landscape. In fact, with this proactive decision, a path of continuous evolution and resilience begins.

Consequently, this choice positions the company not only as a reliable custodian of sensitive data and information, but also as a conscious and responsible innovator in the digital age.
